

MASTER OF SCIENCE IN CHEMISTRY (SCIENCE)

Web Site: <https://twu.edu/chemistry-biochemistry/graduate-program/>

This degree plan is suggested for those who wish to pursue a career in teaching, health sciences, sales, or other non-research scientific fields.

We offer the M.S. degree in chemistry with research focuses in biochemistry, biophysical chemistry, organic chemistry, and inorganic/materials chemistry. A course of study and research will be custom-designed by a faculty committee to suit your individual research interests and career goals.

As a master's degree-seeking student, you will be required to take a minimum of four basic chemistry courses in order to establish a strong foundation in the field. You will then be encouraged to take analytical, biological, inorganic, organic, and/or physical chemistry advanced graduate courses to gain more in-depth perspectives. There are two pathways to our master's degree: a research path, or a coursework path with a science or business track emphasis.
